- **Eliminates the need for large amounts of paper documentation**
- **Available on all smartphones**
- **Uses QR codes to view operatives' unique information**
- **Track operatives' attendance to crucial task briefings**
- **Instant email alerts when a report is completed**

## Site Documents App

Designed specifically with the construction industry in mind, the DataScope Site Documents app enables users to easily complete a range of Health and Safety documents, view operative information, and track their attendance to site briefings all from a smartphone.

Site Documents App is an intelligent way to complete health and safety and close call reports directly on site, eliminating the need for cumbersome amounts of paper documentation. Completed reports are instantly sent to your site's health and safety team and can be easily viewed online via our intuitive web-based interface.

By simply logging in or scanning an operative's unique QR code, view a fully-customisable range of information about the individual such as their qualifications, permits held, or personal information. Our Site Documents App can also be used to add them to a list of attendees at a task briefing. The completed list of attendance is then stored securely online.

Once users have been added to the database, they simply need to download the app from their provider's app store and log in with their unique ID. An unlimited number of operatives can have access to the Site Documents app and an unlimited number of reports can be added. Our in-house team of developers can customise the details to meet your exacting needs.
