

datascope

- **Online Sticky Notes task planning app**
- **Organizes work for different buildings, different floors or different projects**
- **View tasks as sticky notes or on a timeline**
- **Colour coding for different contractors**
- **Option to set up text/email alerts**
- **Ability to display Sticky Wall on digital signage around site**

Sticky Wall

With construction projects becoming more complex and larger in scale, effective planning and coordination has become increasingly challenging. DataScope has recognised this challenge and designed a digital solution which takes huge amounts of data from several sources and turns it into a visual sticky notes board and timeline of tasks ideal to use in planning meetings and daily briefings.

With a secure internet connection and login, Sticky Wall is immediately at your disposal to plan and organise complex projects. Users simply need to log in and fill out a T Card and the task will automatically be displayed on the application with the ability to upload relevant photos or files to each task.

Make planning meetings more productive by having subcontractors view, manage and plot their own tasks on Sticky Wall as well as viewing the calendar of what is taking place across site before a planning meeting takes place. Once the meeting is finished the data can be viewed as a report and sent to the relevant contractors.

Sticky Wall can be used as a highly effective planning tool on its own, or can be seamlessly linked with our DataTouch programme, meaning any assigned tasks or Hotspots will automatically be ready to place on an interactive plan of the site.
