DataTouch

- Interactive plan of site for Daily Planning and Briefings – draw or add hotspots
- Delivery Management
- Advanced Planning
- Traffic Management
- Fire Management
- Gathers your data from the DataHub
- Can be connected with any smartphone or tablet

DataTouch is an interactive management tool geared towards giving you a consistent and in-depth look at what takes place daily on site. It has been designed to minimise risk, reduce conflict, streamline workflow, all while eliminating the need for paperwork.

Used by Sir Robert McAlpine, Kier, Mace and Berkeley Homes on many high profile projects, DataTouch has proven to be an invaluable tool in the daily site operation.

What is DataTouch?

DataTouch utilises powerful software, built by DataScope, to deliver a range of user-friendly programmes to help with highly-effective planning and managing of your project. Using a DataScope controller and a secure internet connection DataTouch is at your disposal on any TV.

How does it work?

Integrated seamlessly with the DataHub, DataTouch uses all of the data captured for your site by the Time and Attendance and Delivery Management systems as well the Asset Tracker, Permits and Environmental Data, saving valuable time while ensuring consistency of data cross-project.

What are the benefits?

Effective Planning

During a Daily Briefing, contractors can use the interactive plan of the site to assign their own tasks to specific areas; highlight exclusion zones; positions of assets & waste and much more all via a simple drag and drop format. The programme will automatically alert you if an asset has missed an inspection and whether you have the right people for the task needed.

DataTouch can also be used to assist with the planning of traffic in and out of sites as well as fire routes by simply using interactive plans of site which can easily be drawn on and changed at any time.

Engage Your Workers in Risk Management

Seeing business-critical data displayed in such a visually dynamic way has been proven to embed key messages quicker.

Reduce Conflict on Site

Using DataTouch allows contractors and subcontractors to clearly see who is working where, eliminating the risk of clashes on site.

Once the session is over, a report is sent to the necessary parties. All of the data is securely saved and can be easily accessed or referred back to.

Update Essential Information in Real Time

DataTouch can also be connected to our Site App allowing you to add new work, hazards and waste while walking around site all from a smartphone or tablet. This ensures that any issues or tasks picked up on during a site walk-around are quickly communicated in real time. Photos can also be uploaded and attached to a hotspot
