Online Inductions

- **Reduces the time taken to induct new operatives onto site**
- **Minimises health and safety risk**
- **Multiple media options.** Ensures that the message is embedded quicker
- **No need for paper.** Reduce costs and carbon footprint
- **Can be accessed from any device:-** smartphone, tablet, computer
- **Add and edit any questions needed at any time**
- **Easily monitor the performance of operatives**

DataScope's online induction is a simple yet effective way to deliver key health and safety messages in a visual yet time-effective way. With our online induction, you can bring together a range of fully-customisable questions, images and videos to walk operatives through general health & safety guidelines even before they arrive on site.

Simple and secure

Our online inductions can be completed online from any location meaning the time that would have been taken to deliver the induction can be spent where it really matters. Once operatives have been added into the system, they simply need to follow the link provided to them and complete the online induction. The operatives' progress and performance is tracked and securely stored on our database, ready to be reviewed at any time.

Minimise Risk

With the ability to create your own questions and answers, our online induction allows you to set minimum pass rates for any questions asked, ensuring that an acceptable standard of safety has been absorbed by the operative.

Flexibility and Control

Questions and slides can be added or changed at any time together with the option to add more languages meaning that you can tailor the induction for those whose English isn't their first language.
