# Time & Attendance

DataScope's industry leading Time & Attendance system underpins all of our Access Control hardware and is a simple way to control labour costs, minimise compliance risk and improve workforce productivity.

Development first started in 2004, and today it is the most advanced and flexible Time & Attendance solution to the construction industry.

Each system is configured to specific requirements with a wide range of Access Control options with full control of individual, company and work level access. The system comes with a mature reports engine and dashboard solution that allows you to export a range of site and health & safety reports in just a few clicks.

DataScope offers a wide range of hardware options to suit sites of all requirements including a range of turnstile options, plug and play units, and a Remote Worker App. All of our Access Control Hardware comes with DataScope's Time & Attendance System as standard.

Access Restriction Management

Compentency Management

Briefing Tool

Reporting Suite

Operative Onboarding

Training Module

Fatigue Management

Operative Access Restrictions

The DataScope system allows for site, contractor, and operative restrictions to be set, based on individual competencies, work level, warnings, site schedule among others.

Access restrictions can also be set to specific site areas where necessary and the system is also set up to detect and prevent duplicate swipes (pass back).

Intelligent Operative Management

DataScope's Time & Attendance System is set up to enable subcontractors to add and manage their own operatives on the system, saving costly administration time.

Compentency Management

As a CSCS Partner, our systems are fully intergrated with the Construction Skills Certification Scheme.

Reports Engine & Dashboards

DataScope's System comes with a mature reports engine and dashboard solution that allows you to export a range of site and health & safety reports in just a few clicks. Reports can include:

- Heath & Safety

- First in last out

- Live number of operatives on site

- Operative's with critical competencies expiring

- Swipe misuse

- CO2 usage travelling to and from site

- Training statistics

- First-aider Reports

Access Control Technology

All of DataScope's Access Control hardware comes with a range of options from access control turnstiles, swipe cards, facial fecognition, as well as dual authentication. options.

Access Control Hardware Options

Turnstiles

DataScope has a wide range of Access Control turnstiles that can all be augmented by any of our access control options including fingerprint, facial recognition and swipe card access.

DataPod

Datapod feaures lockable anti-vandal shutter door, a tool hatch and can be liveried to company colours. The only site requirement is power.

DataTime

DataTime is a plug & play option which provides operative safety feedback. You're able to capture shift/fatigue/toolbox talk records and ask range of fatigue management questions.
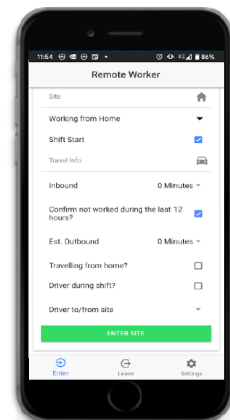

Rapid Deploy Turnstile

Plug and play solution that simply requires power and is quick to deploy and relocate. Biometric and/or swipe card enabled.

Rugged Tablet

Record attendance and use as a digital muster point. Swipe in and out by tapping card on the back. All swipes recorded are fed into the online Time & Attendance System for review.

Remote Worker App

Monitor movement of workers attending remote sites at any location with management able to view maps showing operative swipes and generate reports. Operatives can use the app to clock in and out from any smartphone.
