

Waste Management Software

Manage and complete a wide range of Health & Safety and Assurance forms and process tasks from any smartphone device as well as dynamically manage them all from one platform with DataScope's Field Management System.

Book and manage waste collections through an online portal

Complete electronic WTNs and HWCNs through the online portal and app

Live tracking of waste from site to waste facility

Manage waste carrier compliance

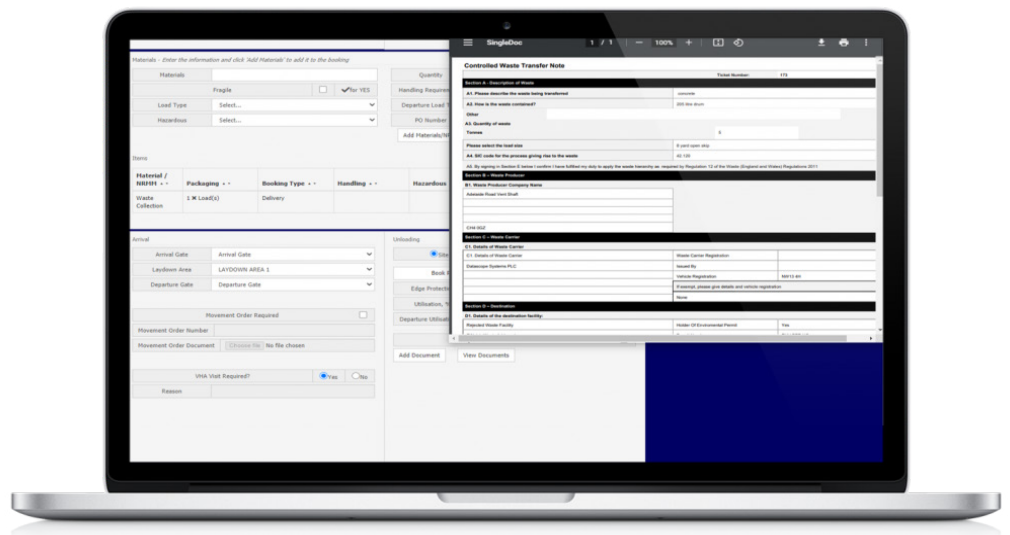

Comprehensive reporting

Electronic audit trail

Book and manage waste collections

Construction teams can book and manage waste collections via our online portal which also functions as our Delivery Management System. Team members can view a live delivery gate schedule to ensure there are no clashes.

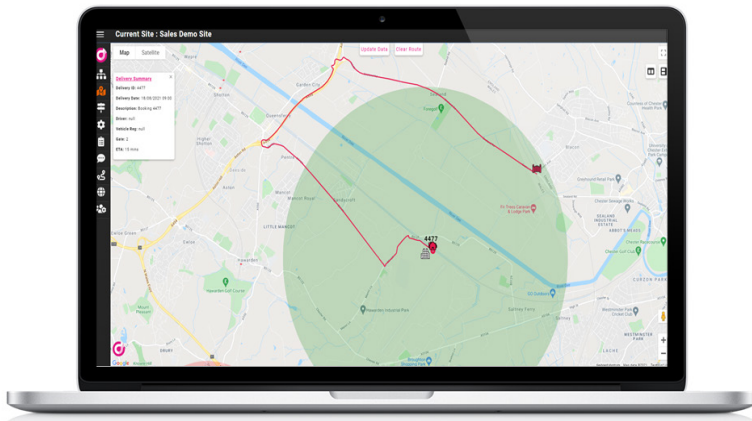

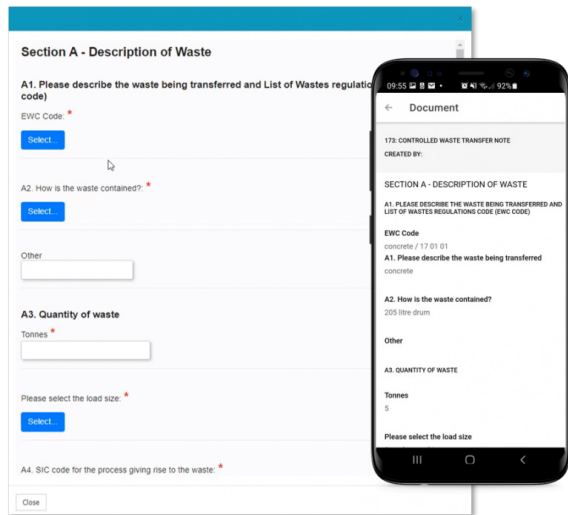

Digital waste transfer notes

Booking a waste collection on our system automatically generates a Waste Transfer Note or a Hazardous Waste Consignment Note that can be partially completed on the system and then sent to the haulier driver to complete on their app.

Secure audit trail

All Waste Transfer Notes submitted on the app available as a downloadable PDF on the web system with a full, timestamped audit trail of who completed the document and when.

Live vehicle tracking

Our Waste Management System integrates seamlessly with our Haulier App allowing drivers to complete Waste Transfer Notices from their smartphone as well as track the waste vehicle from site to the waste facility.

Reporting

Our system comes with a comprehensive Reporting suite that allows users to run detailed reports on any data captured by our system and app.
